Intelligent video surveillance systems increases its IQ

iOmniScient, have incorporated both their Internationally Patented Non-Motion Detection (NMD) with their highly advanced Video Motion Detection (VMD) in their intelligent video surveillance system.

The outcome is IQ-Infinity, a very comprehensive Intelligent Video Surveillance application.

The launch of IQ-Infinity was taking place at ISC West in Las Vegas in early April. The convergence of NMD with VMD gives IQ-Infinity the full range of iOmniScient's detection capabilities, of which many are only available from iOmniScient. Some of these capabilities include Abandoned Object Detection in a Crowd, Theft Detection in a Crowd, Graffiti and Vandalism Detection in a Crowd, Crowd and Traffic Management, Perimeter Protection and Intruder Detection and Counting, as well as complex Behavior Analysis and Tracking.

Dr. Rustom Kanga, CEO of iOmniScient had this to say about the current position of iOmniScient:

"These are very exciting times for iOmniScient. ISC West will see the launch of a lot of time effort in IQ-Infinity, as well as the launch of yet another World First, IQ-Hawk. We will also be announcing the release of IQ-Implant, an embedded version of our unique software".
